

How to be a futurist: Using information from the past to inform the future

Recently, I lectured at Berkeley University and Stanford University on how extrapolations from the past can be used to inform the future. The lecture covered aspects such as AI, Systems Dynamics, and Trophic Cascade to mention a few. Being a good tupuna not only means acknowledging the past but also generating new information that can be used in the future as we ourselves become tupuna to the next generations. Join me where we will look at some of the current suggestions addressing decarbonisation, reducing global temperatures and why the need for becoming more environment centred rather than human centred will lead to effective climate intervention.
